

TOP TEN TIPS FOR CYBER SECURITY

HOW TO SECURE YOUR BUSINESS AGAINST CYBER RISK AND THREATS

- 01 Make security personal to your business** – understand your business and how IT is leveraged to deliver it.
- 02 Baseline your security regularly** to understand your state of readiness, and so that you can interpret the symptoms that could lead to a cyber incident.
- 03 Get executive and board engagement.**
- 04 What is your resilience plan?** Security incidents happen every day. How do you identify the important incidents and ensure the business remains effective and up-and-running through them?
- 05 Education** – from board to new hire, it's essential that everyone understands that they are responsible and accountable. They need to know what part they play in the wider whole.
- 06 Do the basics well** – leverage government and industry guidelines. This includes aspects such as patching and good user-level access management.
- 07 Plan for today and scale for the future** – as an example, BYOD is here to stay, we must stop applying quick fixes to issues, unless they are aligned to a longer-term strategy.
- 08 Start small, but think big.** Information protection is a long-term project, but we need to start where we will add the most business value and then continue to expand out where there is further, long-term business value. This can include, for example, the supply chain and how we interact with our wider network of vendors and partners. The key here is to think big but have a maturity plan, which must be linked to strategic business value and growth.
- 09 Be accountable** – understand what the regulatory, legislative and peer-to-peer controls are that you need to adhere to. Make sure you have a clearly defined owner for each of these and an executive sponsor.
- 10 Don't wait for it to happen** – test your processes, procedures and people regularly. Make sure you have clearly defined life-cycles that reflect changes in business strategy, technology use and culture. Make sure your strategy is current and effective for the business and the risks.
